PROFILE SUMMARY

I am a BSIT graduate from Quaid-i-Azam University. I worked as a Web Engineer at FRPD, developing and maintaining web applications and improving system performance. I also completed internships in AI at Eve Bytes and in Machine Learning and Deep Learning at National Center for Physics (AIteC), gaining hands-on experience with AI systems and data-driven projects. I have a strong foundation in computer systems, networking fundamentals, and programming in Python, Java, and C++, with project experience in real-time surveillance systems and database-driven applications.

EXPERIENCE

01/2026 - Present Remote, Pakistan	Software Engineer FRPD	
08/2023 - 10/2025 Remote, Australia	Software Engineer Digital Tent Studio	
08/2024 - 09/2024 Islamabad, Pakistan	Machine Learning & Deep Learning Intern National Center for Physics (AIteC)	
04/2024 - 05/2024 Remote	AI development Intern Eve Bytes	

EDUCATION

09/2021 - 08/2025 Islamabad, Pakistan	Bachelor of Science in Information Technology (BSIT) Quaid-i-Azam University, Islamabad CGPA 3.3 / 4.0	
---	---	---

TECHNICAL SKILLS

- Web Development:** Developed and maintained responsive web applications, improved system performance, handled backend integration, and supported deployment processes.
- AI, Machine Learning & Deep Learning:** Worked on AI based solutions by designing, training, and evaluating machine learning and deep learning models for data driven and system level applications, including real time surveillance systems, while implementing intelligent features in real world development projects.
- Systems Administration:** Windows System Administration Basics, Linux Environment Basics, User Access Control, System Configuration and Maintenance
- Network Fundamentals:** Routing and Switching Concepts, LAN and WAN Basics, IP Addressing, CCNA Level Networking Knowledge. Basic Network Security Concepts, Secure System Practices, Monitoring and Incident Awareness
- Virtualization & Environments:** Virtual Machine Concepts, VMware Fundamentals, Hyper V Basics, Lab Based Virtual Environments
- Tools & Platforms:** Git, VS Code, Basic Networking and System Tools

Professional Skills

- Leadership
- Communication
- Management
- Problem Solving
- Project Management

KEY ACHIEVEMENTS

Real-Time Suspicious Activity Detection System (Final Year Project + Thesis)

- Developed a real-time system using Python, OpenCV, and AI APIs for monitoring suspicious activities.
- Served as the thesis project for final year BSIT, demonstrating system integration and problem-solving skills.

System Administration Semester Project – Server Administration

- Set up a fully functional domain environment using Hyper-V/VMware.
- Configured Windows Server, Active Directory, DNS, user/group management, GPOs, and client-server verification.

Networking Final Project – Networking Essentials

- Designed and implemented a small office network in Cisco Packet Tracer.
- Configured routers, switches, static IP addressing, and verified connectivity across departments.

International Workshop on Microsoft Technologies

- Organized and managed the workshop at Quaid-i-Azam University, enhancing technical learning and community engagement.

PROJECTS

University Management System

University Management SaaS Portal is a comprehensive Flask-based web application supporting 5 distinct roles (Student, Teacher, Office Staff, HOD, System Admin) with granular permissions across multi-tenant universities and departments. It manages the complete academic lifecycle from enrollment to reporting with robust security, notifications, and approval workflows.

Real Time Suspicious Activity Detection

FINAL YEAR PROJECT

A Python-based Suspicious Activity Detection System that uses YOLO pre-trained models to detect harmful behaviors (Gun, Fighting etc) in real-time video feeds and uploaded footage. It sends alerts, logs incidents, and supports multiple camera feeds for enhanced surveillance.

File Management System

SEMESTER PROJECT

- Developed a desktop application using JavaFX and Scene Builder for the front-end as part of Object-Oriented Programming coursework.
- Integrated a back-end database using XAMPP and SQL to ensure efficient data storage and management.

IIT Department Web Portal

SEMESTER PROJECT

- Developed a comprehensive departmental website for the Institute of Information Technology as a semester project using HTML, CSS, JavaScript, and Bootstrap.
- Created five dynamic pages with service and contact details, and integrated a back-end database using XAMPP and SQL for efficient data management.

English Department DBMS

SEMESTER PROJECT

- Created a SQL web-based DBMS to manage staff and student records with login authentication and CRUD functionality.

Hand Gesture Brightness Control

SEMESTER PROJECT

- Used MediaPipe and OpenCV to create a gesture-controlled system that adjusts screen brightness in real-time.

Disease Prediction App

SEMESTER PROJECT

- Machine learning-based application to predict potential illnesses based on user-input symptoms using trained datasets.

CERTIFICATION

01/2025

International Workshop on Microsoft Technologies

MicrosoftPak-Finland Capacity Building Initiative (Phase-1) held at Quaid-i-Azam University, Islamabad

TECHNICAL CERTIFICATION

05/2025

CCNA: Introduction to Networks

CISCO

05/2025

Computer Networking

Ezxprt

05/2025

CISCO Packet Tracer

Ezxprt

05/2025

VMware Workstation

Ezxprt

03/2023

Introduction to Cybersecurity Tools & Cyber Attacks

Credly by Pearson
